History /

Biographical:

During the mid-1930s the economy and popularity of light, fast passenger trains were proven in the USA by the Burlington's "Zephyr", the Rock Island's "Rocket", and the Milwaukee Road's "Hiawatha". In 1936 the CPR built engines 3000-3004, designing each to haul a lightweight baggage car and three day coaches. Before being assigned to "The Chinook" between Calgary and Edmonton, engine 3001 and its train made an extensive publicity tour of western Canada.

[Built by Montreal Locomotive Works in 1936, this class of five F2a 4-4-4 locomotives (3000 - 3004) were named "Jubilee" type in honour of the 50th anniversary of CPR transcontinental service. P.E.]

Material Details: Negative

History /

Biographical:

According to Stuckey and Bain (1996), "The Brandon, Saskatchewan & Hudson's Bay Railway was built and operated as a totally owned subsidiary of the Great Northern Railway. Construction commenced in late 1905 and by the end of 1905, less than a mile of track had been laid north of the boundary at St. John. In 1906, the remaining 68.6 miles to Brandon were laid and service commenced that year. During the Depression of the 1930s, traffic declined significantly and the entire branch was abandoned in 1936. Over much of the branch's length, the ties and rails were laid on the prairie without ballast and today little remains of the line apart from traces where there were cuts and bridges." (p. 18)

This engine was built by Brooks in March of 1883 as No. 887 and marked as scrap [by the GN] in 1937. This engine is known to have worked passenger trains to Brandon. This class of locomotive was replaced by gas-electric [power units] in 1929 but they would be used if no gas-electric was available. Engine 185 sat dead in Minot from the closing of the Brandon line until it was scrapped.

History /

Biographical:

The Towerman controlled the crossing gates, [as well as] switches and signals for all routes into and out of the station and freight yards. [Mr. Stuckey's] grandfather, Samuel Gilmour, operated the previous tower for many years (which only operated the crossing gates), and continued to operate the new tower for several years after it was built (ca. 1929). This tower was made obsolete with the installation of Centralized Traffic Control in 1965.
