Biographical:

The Crepeelee site was identified from the results of the Casselman survey. The site is located within the Crepeelee locale approximately 400 meters to the west of the Sarah site. The units were excavated by Crew Chief James Graham and the crew from the survey.

The Crepeelee site was excavated in 2003 as Crepeelee 3 with the units numbered as units 10, 11, 12 & 13. These numbers have been changed on the catalogue to XU 110 – 113, due to duplication in 2005. Corresponding documents have been changed but there may be some reference to the initial numbers in the field journals.

The artifacts recovered from these four excavations are faunal (animal bone), mainly bison, lithic materials (stone tools and flakes) and some ceramic (pottery). The artifact catalogue has over 600 records.

Scope and Content:

Sub-sub-sub series contains: Summary information of field methodology, number and co-ordinates of excavations, personnel and their staff position; Field journals are daily records of recoveries, features and activities at the site; Site records include excavation level and unit summaries, feature sheets, profiles; sample records and maps; Artifact catalogues are lists and identifications of all artifacts recovered; Photographs are of excavation units, features, the landscape and personnel.

1.2.1.1 Summary Information

The Copeptide site is located within the Copeptide lysate and approximately 200 residues to the right of the Serine site. Copeptide site was investigated in 2003 as Copeptide 1. The data show a 100% match between the two sites and the survey was also used for the investigation. A Serine domain of 100 residues was identified for the site and given the coordinates of 1000000000.

Copeptide site 2003

The site was originally investigated as Copeptide 10, 11, 12, & 13. These numbers have been changed on the catalogue to 101-103, due to duplication in 2003.
