### History /

#### Biographical:

Block D is a wooded with oak and an understory of saskatoon and hazelnut with a thick ground cover of poison ivy and sarsaparilla. Root and rodent disturbance was extensive.

Directed by Dr. Nicholson with Ian Kuijit as crew chief, five units were opened in Block D in 1988. Four units were excavated: 88, 91, 92 and 94. A feature in units 91 and 92 contained extensive deposits of large bison bone and fire-cracked rock. Several of the lower limb elements were articulated. Bone deposits were associated with numerous large fire-cracked rocks and were clustered in an area of one meter. Also recovered were a side-notched projectile point and two historic gun flints.

Judging from the association of the gun flints, projectile points, and bison bone, as well as the radiocarbon date of 230+/-90 B.P. recovered in 1987, it appears that this feature is from the Protohistoric period and related to refuse disposal.

#### Scope and Content:

Sub-sub-sub series contains: Summary information of field methodology, number and co-ordinates of excavations, personnel and their staff position; Field journals are daily records of recoveries, features and activities at the site; Site records include excavation level and unit summaries, feature sheets, profiles; sample records and maps; Artifact catalogues are lists and identifications of all artifacts recovered; Photographs are of excavation units, features, the landscape and personnel.

## Documents

*Feature 40 1988 D/L-1*

**Feature Form - Brandon University - 1988**

**1. List feature contents** - In Lovstrom Block D, feature 40 is a small, shallow, circular pit, approximately 1.5m in diameter and 0.5m deep. It contains a small amount of debris, including a piece of wood and some metal fragments. The feature is located in the center of the excavation unit.

**2. Description of feature matrix (FMS)** - The feature is filled with a dark, silty material, which appears to be a mixture of soil and organic matter. The material is relatively uniform in color and texture, with some small clumps of organic material visible.

**3. Description of matrix in which feature is located (FMS)** - The feature is located in a matrix of light-colored, silty soil. The soil is relatively uniform in color and texture, with some small clumps of organic material visible. The feature is located in the center of the excavation unit.

**4. Methodology, how was this feature excavated and reported?** - The feature was excavated using a hand shovel and a trowel. The excavation was carried out in a series of small, controlled increments, with the soil being removed in layers. The feature was reported as a small, shallow, circular pit, approximately 1.5m in diameter and 0.5m deep.

**5. Feature integrity, how this feature appears to be in primary context, or has it been disturbed? What evidence is there to back up your interpretation?** - The feature appears to be in primary context, as it is located in a relatively undisturbed area of the excavation unit. The evidence supporting this interpretation includes the uniformity of the feature matrix and the lack of any obvious signs of disturbance.
